

EVERY DROP MATTERS.

The Rose captures and reuses 75% of the water that would otherwise go into city sewer systems.

ROOFTOP RAIN

2/3 of our rainwater is funneled into an Earth-friendly water collection system.

HAND PUMP

Pump the handle several times to start water flowing!

CLEAN CISTERN

Fresh rainwater is stored underground until our gardens need it.

PERMEABLE PIPES

Our rain gardens capture 1/3 of our rainwater, allowing the earth to clean it naturally before it enters our clean cistern.

DIRTY CISTERN

Driveway runoff is captured and slowly released deep underground, where it's filtered and purified naturally.

UNDERGROUND PARKING

Water is for garden use only. Do not drink.
